Foqus Planet: KPI-Based Price Premiums for Biodiversity on Dairy Farms

Sanne Dekker - 6th October 2026 - Fit for Biodiversity Conference - Brussels

> 15,000

≈ 27%
of the NL landscape
is managed by
dairy farmers

**ambitious member
farmers in the
Netherlands, Belgium,
Germany and France**

The company is owned by
Zuivelcoöperatie FrieslandCampina U.A.

FrieslandCampina is globally present

Branches in 30 countries and export to >100 countries

North & South America

Growing market for high-quality Dutch cheeses

Africa & the Middle East

Increasing demand for affordable dairy products

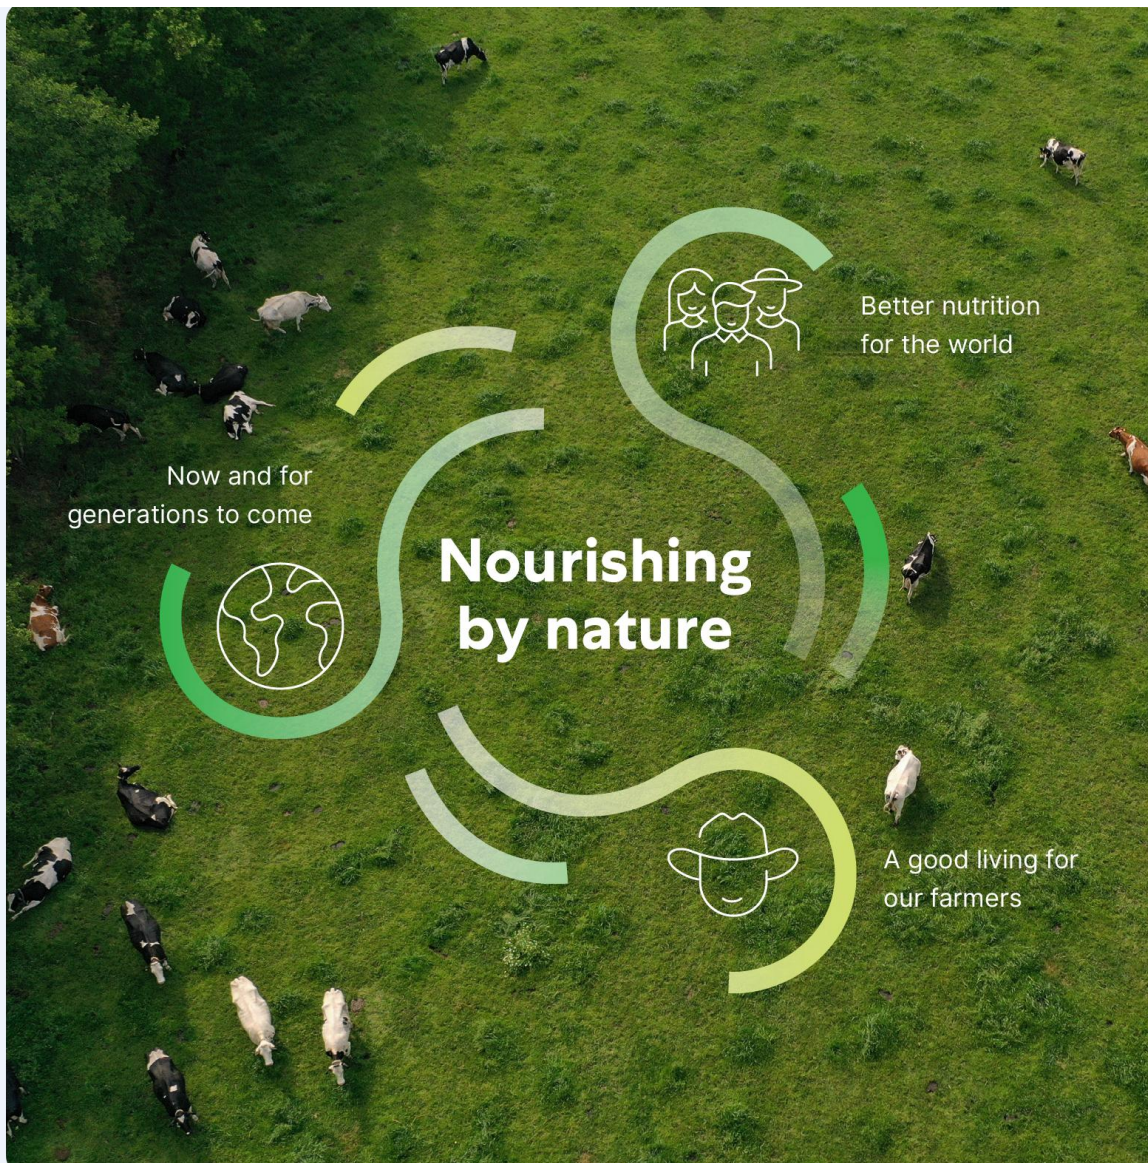

Europe

Strong local brands, private labels and food service

Asia and Oceania

Growing market for high-quality dairy products

Our purpose

guides our ambition

- **Better nutrition for the world**
- **A good living for our farmers**
- **Now and for generations to come**

nourishing by nature

We support member dairy farmers with data, knowledge and tools

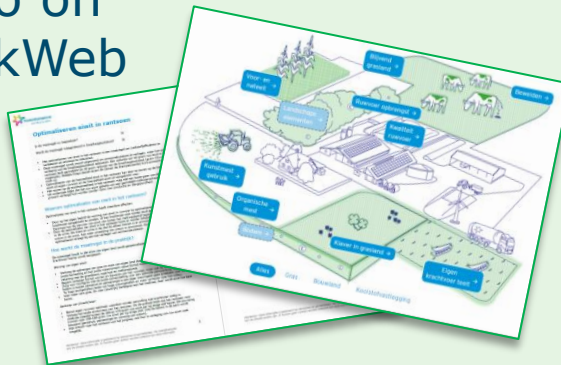

Learning from leading farms

Best-practice tools

Sustainable development through and integrated approach

Financial rewards for continuous improvement across four sustainability themes

Themes	Indicators	Threshold value (start of bonus)	Bonuses					Top value (maximum bonus per 100 kg of milk)
 ANIMAL HEALTH AND WELFARE	 Longevity (years + months + days)	€0.00	5 years and 4 months					€0.10
	 Calf rearing (KalfOK)	€0.00	75 points					€0.10
 CLIMATE	 Greenhouse gas emission (gram CO ₂ -eq/kg milk)	€0.00	925 g CO₂-eq					€1.50
 BIODIVERSITY	 Nitrogen farm balance (kg N/ha)	€0.00	225 kg N/ha					€0.30
	 Protein from own land (% of total protein used)	€0.00	50%					€0.30
	 Nature & Landscape (% total surface)	€0.00	10%					€0.40
 GRAZING	 Grazing	€0.00	Partial grazing €0.40 Full grazing €1.30					

Everything we do is guided by our purpose Nourishing by Nature

We **rely on nature** to nourish for generations to come

We're at risk of **depleting** our natural resources

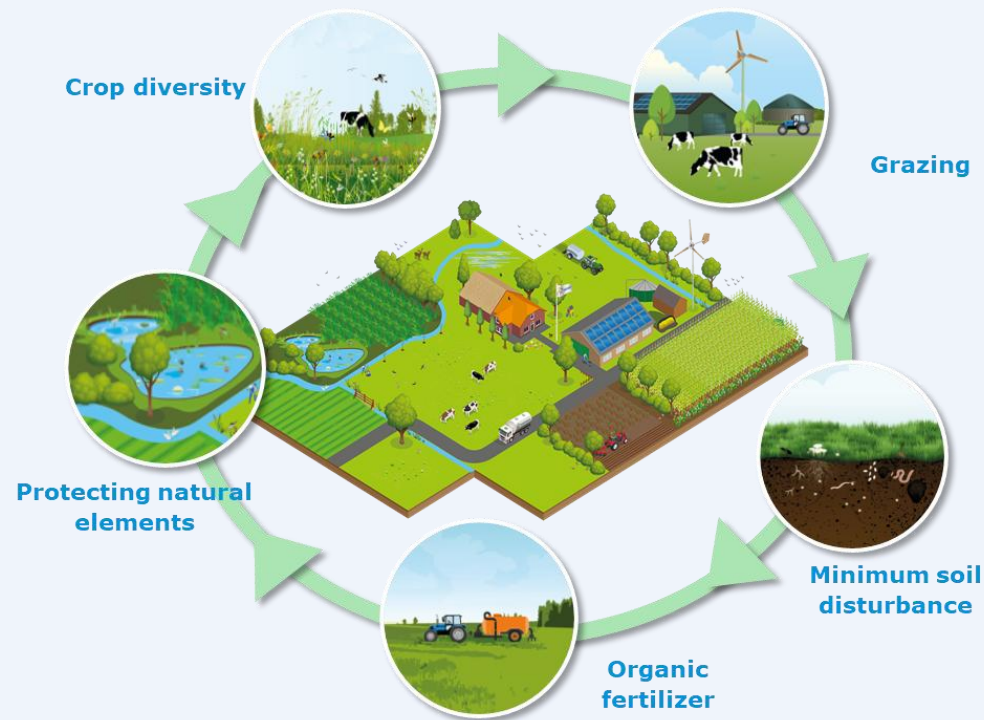

It's too late to prevent – we need to **regenerate**

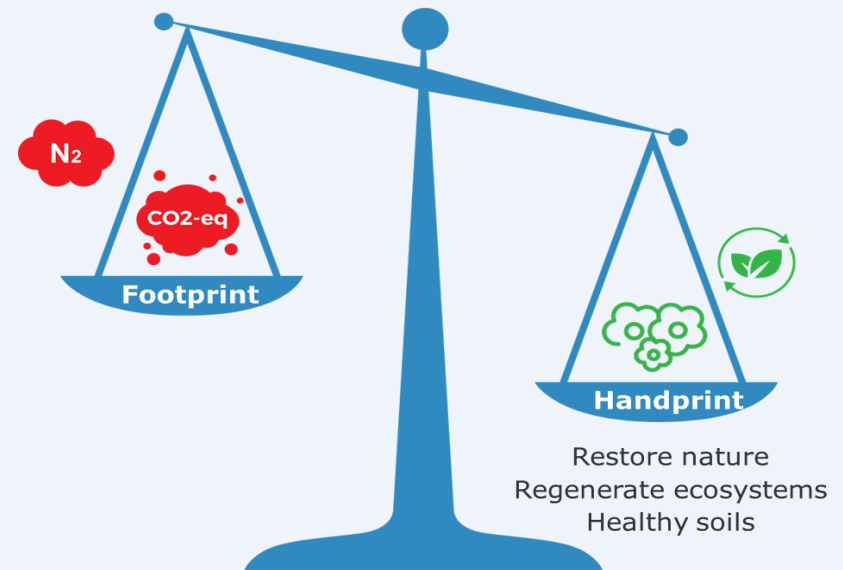

Regenerative agriculture has two main characteristics

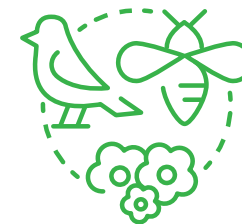

Maximum use is made of nature's power

Results are measurable

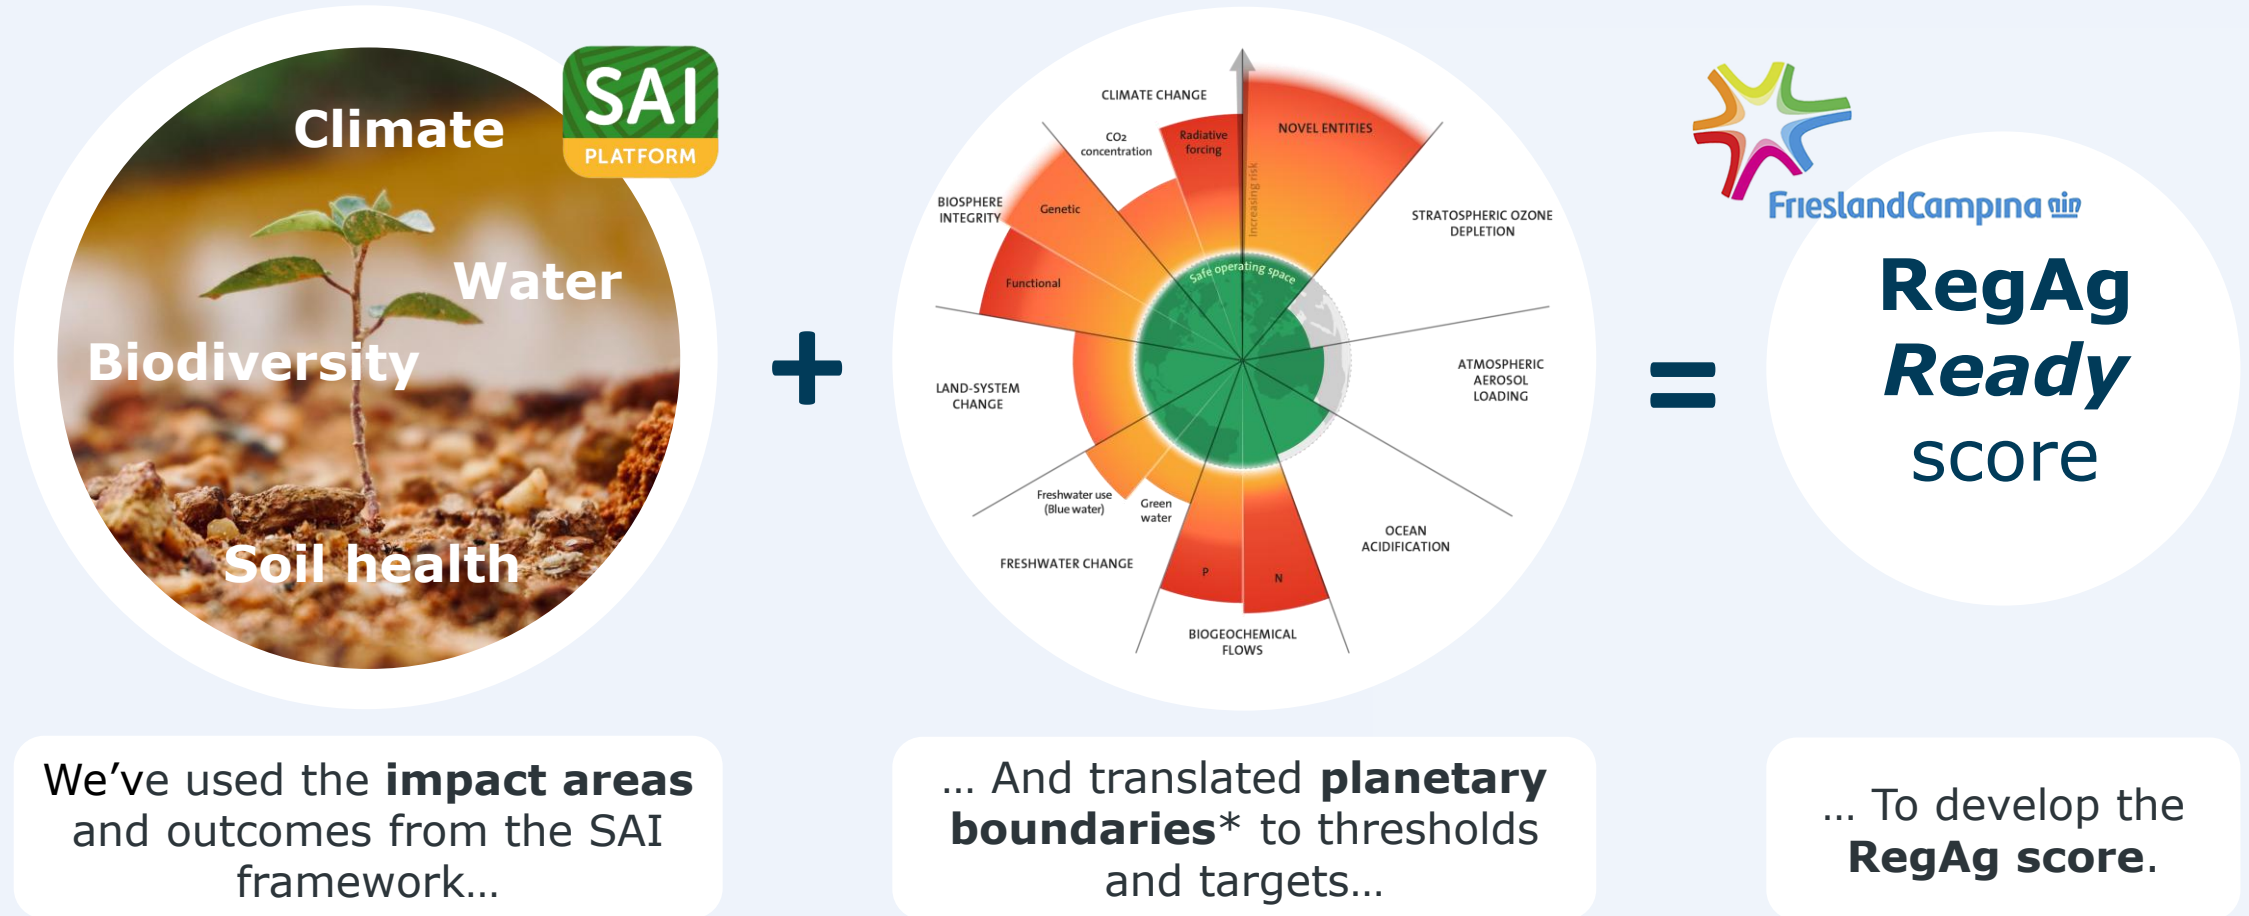

What means Regenerative dairy farming in practice?

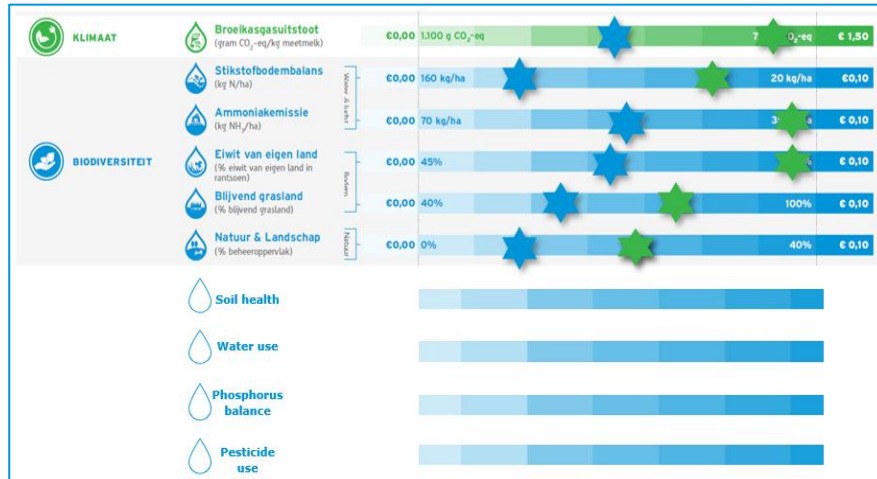

1. As few external inputs as possible in the system
 - local circular products, avoiding synthetic fertilizer & crop protection & external concentrates
2. Intervene as little as possible on natural processes and use natural principles
 - non-inversion tillage, biodiverse and herb rich grassland
3. Increase circularity
 - use reflows, replace wheat as a concentrate, reduce the protein content of rations to improve N efficiency
4. Prevent unnecessary losses
 - Additives for methane reduction, low-emission barn floors

To monitor on-farm results, FrieslandCampina developed the **RegAg Score**

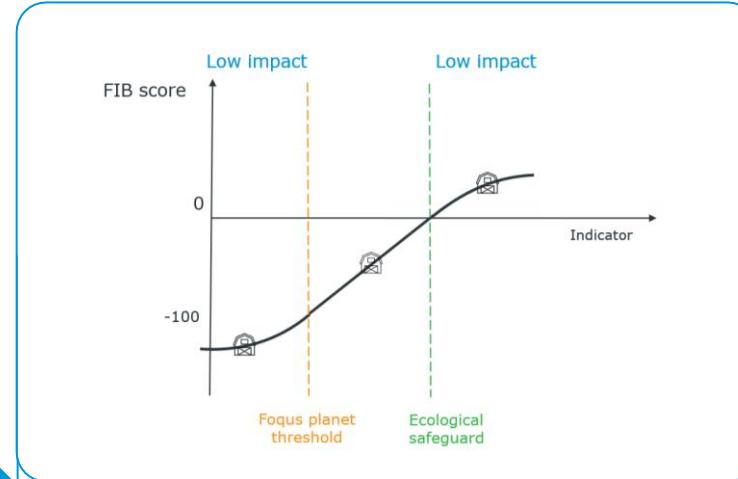

RegAg Framework - Indicators integrally combined on farm level prevent trade-offs

Fokus planet indicators

- ✓ Result based
- ✓ Clear targets per indicator
- ✓ Ecological thresholds (★) and ecological safeguards (★) based on science & legislation

Farm Impact Balance score

- ✓ Incentivize farmers for continuous improvement
- ✓ Taking into account farm diversity
- ✓ Integral measurement for regenerative agriculture: no trade-off between indicators

With the Farm Impact Balance score FrieslandCampina aims to stimulate all member farmers to take balanced steps to improve. With measures and practices FrieslandCampina will provide direction to farmers to close the gap, whereby Climate and Biodiversity both play a role in becoming more regenerative.

We are dreaming of **future fit dairy**

We have a **dream** of future fit dairy, which means FrieslandCampina will be climate-neutral and nature-positive by 2050.

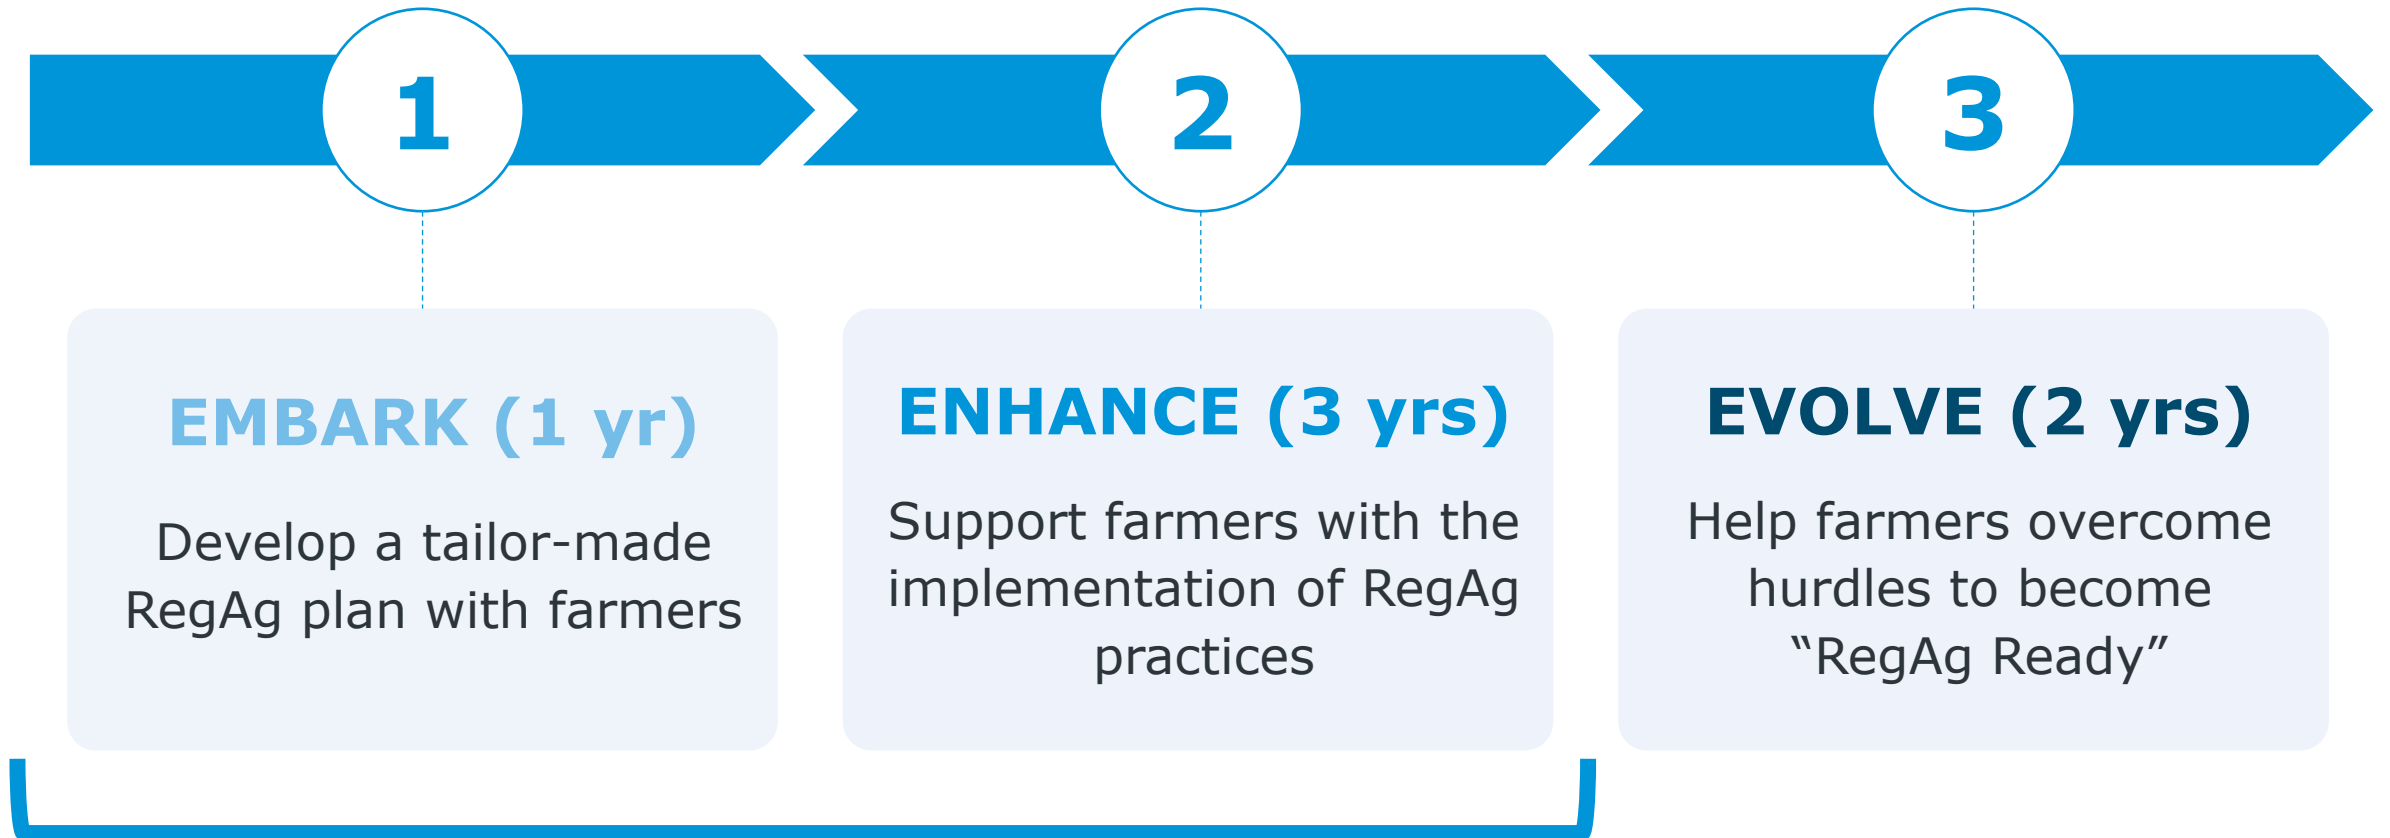

To **realize** this dream, we need to create a movement that supports the adoption of RegAg practices at scale.

Our **ambition** is to have 1,000 farms become **RegAg-Ready*** by 2030.

RegAg Pilot: A **three-step roadmap** to achieving our goal

Reg. Ag. Pilot

We're **collaborating** with the industry to align and reach scale

Develop a **global framework** for
Regenerative Agriculture

1.

Pilot this framework with
Arla and Danone

2.

Research initiative to
validate whether the
actions on the farm secure
the right outcome

3.

Monitoring reporting and
verification

Systems approach
and risk analysis

Improvement options

Practical
implementation

Proven effects

Economically viable

Sustainable dairy farming: from theory to productive reality

A scenic landscape photograph featuring a sunburst effect in the upper left quadrant. The sun is low on the horizon, creating a bright, multi-colored starburst pattern that radiates across the sky and illuminates the scene. The foreground is dominated by a field of tall, golden-yellow grass, which appears to be blowing in the wind. In the background, a line of trees with green and yellow foliage stands against a clear sky. The overall mood is warm and peaceful, suggesting a late afternoon or early morning setting.

**Thank
you**
